

Rural Generalist Intern Year

The Rural Generalist Intern Year is an intern training model based in small rural and sub-regional hospitals with a variety of clinical experiences including general practices and community settings.

It provides medical graduates with an opportunity to commence their postgraduate training in rural Victoria and sets the foundation for a career as a Rural Generalist.

South West Rural Generalist Intern Training Program: (5 positions)

- Includes clinical experiences in Undifferentiated illness care, Chronic illness care, Acute and critical illness care and Perioperative/procedural care.
- Interns experience rural healthcare across a breadth of locations including South West Healthcare and Alcohol and other Drug treatment/General practice service.

Rural Generalist
Internship
vs Metropolitan
Internship

- Unlike a metropolitan-based intern, the Rural Generalist Intern gains hands-on experience as a trainee doctor and offers exposure to not only hospital-based care, but also to outpatient and community-based care.
- A key feature of the Rural Generalist Intern Year is the option to undertake up to 20 weeks training in a broad range of community based clinical settings. All Rural Generalist Interns are individually supported by a VRGP Regional Coordinator.
- Rural Generalist Interns are provided with the opportunity to develop a Rural Generalist training pathway that includes prioritised access to RG2 and RG Advanced positions.

- Applications for internships are made through the Postgraduate Medical Council of Victoria (PMCV) Victorian Rural Preferential Allocation (VRPA) intern computer match.
- For more information about the PMCV intern match, please visit the PMCV website or contact PMCV via email to allocations@pmcv.com.au. Applicants are encouraged to contact the VRGP Regional Coordinator in their region of interest to discuss their individual learning and career needs.
